

AUDIO VISUAL SYSTEM; NETWORK CONNECTIVITY

The Friends of Fairfax Station are pleased to offer these amenities to all users at no cost.

The main exhibit hall (Community Room) offers a permanently installed Audio Visual (A/V) system. The system features:

- A high resolution LCD projector
- Pull down viewing screen
- A stereo speaker system
- A simple to use connector panel for renters to plug in their laptop computers
- Any software application or DVD that you might have on your laptop can displayed as a 50" image, and heard through the stereo speaker system

In addition, renters opting for the A/V package may use the DVD and VHS players in the community room. We provide a 6' VGA to VGA cable and a 6' audio cable to connect your laptop to the A/V system.

In addition we have a VGA to Mini DVI adapter for all you Apple laptop users. Detailed operation instructions are located in the accessory bag which contains the LCD projector remote control, and the cables.

Please note: We encourage you to be familiar on how to connect up your laptop to an external video source as we do not have an IT technician at the museum, and our rental coordinators are not familiar with your computer. Typically this information can be found in your user's manual, which can be a hard copy or these days, more commonly on CD or DVD. In most cases it is a very easy procedure.

Our Wi-Fi network range covers all interior areas of the Museum and extends outside to the Caboose exterior/interior. The Station rentals manager will provide network log-in information.
